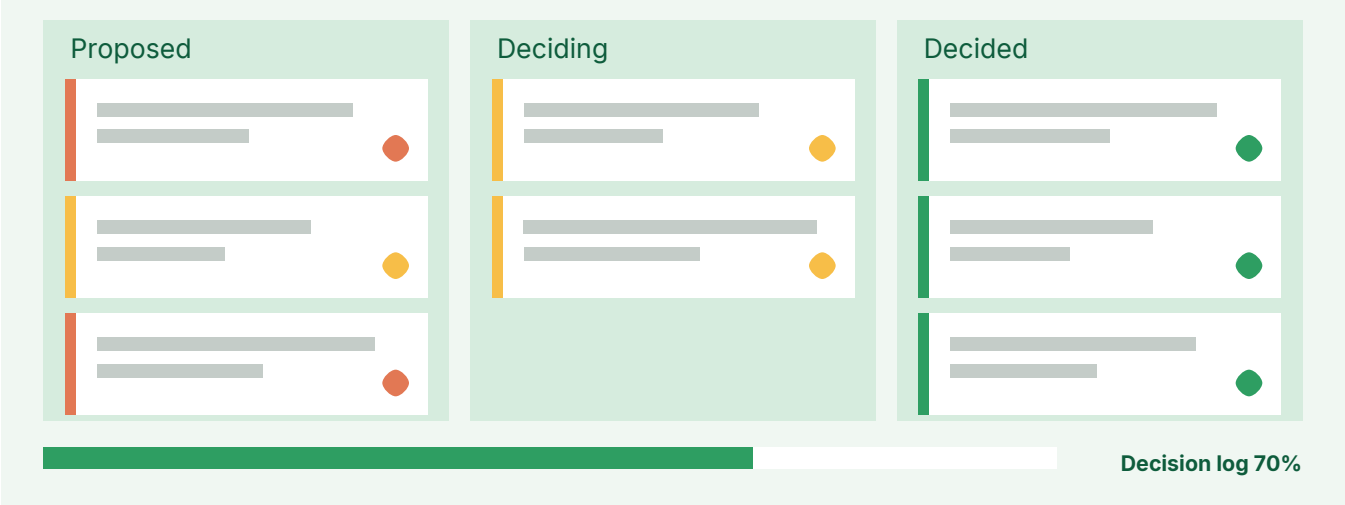
Sprout 2.4

Planning software for small teams that prefer **clarity over ceremony**. Version 2.4 turns every decision into a record your team can find, trust, and print.



The Sprout board moves each decision from proposed to decided in one visible place.

54% faster decisions. Median time to decide fell from 9.5 to 4.4 days over eight weeks.

3 fewer meetings a week. Status meetings gave way to the shared decision log.

41 teams, 612 people. The pilot ran from June to August 2026 across four companies.

The problem

Important decisions disappear across chat threads, tickets, and meeting notes. Weeks later nobody can say *who* decided, *why*, or whether the decision still stands, so teams meet again to decide the same thing.

What is new in 2.4

- **Decision log.** Every card that reaches Decided is written to an append-only log with its owner, date, and rationale.
- **Typed ownership.** Owners are people, not channels; a card without an owner cannot leave Proposed.

- **Archival export.** Run `sprout export --pdf --since 2026-07-01` for a tagged, searchable record that stays readable offline.
- **Quiet notifications.** One daily digest replaces per-card pings; urgent cards still notify at once.

Pilot results

Median time to decide halved and crossed the five-day target (dashed) in week 6.

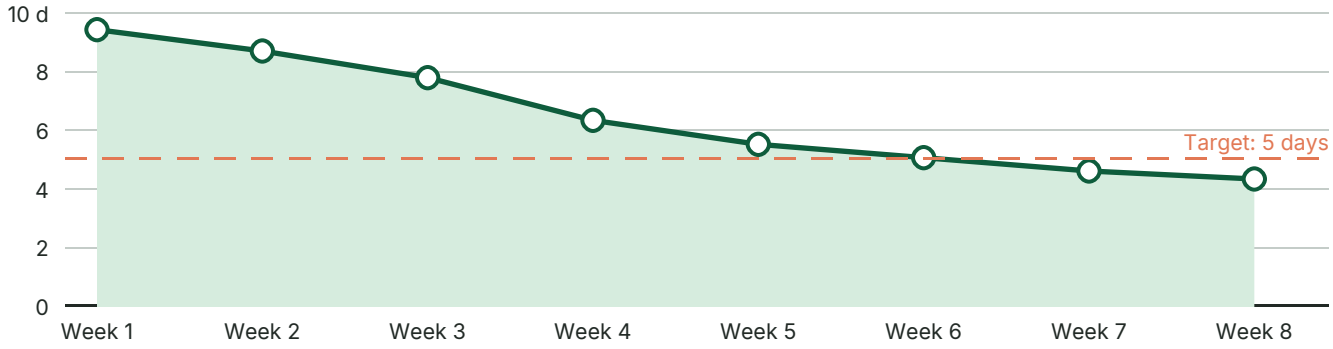


Figure 1. Median days to decide, weeks 1 to 8

Table 1. Median days from proposal to decision, by pilot week

Pilot week	1	2	3	4	5	6	7	8
Median days	9.5	8.8	7.9	6.4	5.6	5.1	4.7	4.4

Plans and pricing

Every plan includes the board, the decision log, and archival export.

Table 2. Plans compared

Capability	Starter	Team	Business
Planning			
Boards and decision log	Yes	Yes	Yes
Typed owners and due dates	Yes	Yes	Yes
Dependency map		Yes	Yes
Sharing and export			
Archival PDF export	Yes	Yes	Yes
Guest reviewers	2	10	Unlimited
Single sign-on and audit log			Yes
USD per editor, monthly	**Free**	**$12**	**$24**

What comes next

1. **November.** Calendar sync, so a decision's due date appears where people plan their week.
2. **December.** Templates for hiring, vendor selection, and architecture reviews.
3. **Early 2027.** A read-only API for dashboards, starting with `GET /v1/decisions`.

Rollout and support

Sprout 2.4 reaches every workspace in three waves. Existing boards migrate automatically; nothing needs to be exported or re-imported.

Table 3. Rollout waves

Date	Wave	What changes
6 Oct 2026	Pilot customers	Decision log and typed owners switch on; export stays in preview.
20 Oct 2026	Team and Business	All 2.4 features, including archival export and quiet notifications.
3 Nov 2026	Starter	All 2.4 features; the digest defaults to 9 a.m. local time.

Support stays with your plan through the rollout. Business workspaces get a migration review with their success manager before their wave switches on.

Table 4. Support by plan

Plan	Channels	First response
Starter	Help centre and community forum	Best effort
Team	Email and in-app chat, weekdays	One business day
Business	Email, chat, and phone, with a named success manager	Four business hours

> “We stopped re-deciding things. The log settles arguments before they start.”
>
> Maya Lindqvist, Head of Operations, Fjordline Studio (pilot customer)
