Release runbook

Step 1

Step 1. Freeze the release branch, run `make release VERSION=1`, and confirm that every mirror reports the new checksum before you announce the build on the status page.

If a mirror lags by more than an hour, pause the announcement and page the on-call engineer.

Step 2

Step 2. Freeze the release branch, run `make release VERSION=2`, and confirm that every mirror reports the new checksum before you announce the build on the status page.

If a mirror lags by more than an hour, pause the announcement and page the on-call engineer.

Step 3

Step 3. Freeze the release branch, run `make release VERSION=3`, and confirm that every mirror reports the new checksum before you announce the build on the status page.

If a mirror lags by more than an hour, pause the announcement and page the on-call engineer.

Step 4

Step 4. Freeze the release branch, run `make release VERSION=4`, and confirm that every mirror reports the new checksum before you announce the build on the status page.

If a mirror lags by more than an hour, pause the announcement and page the on-call engineer.

Step 5

Step 5. Freeze the release branch, run `make release VERSION=5`, and confirm that every mirror reports the new checksum before you announce the build on the status page.

If a mirror lags by more than an hour, pause the announcement and page the on-call engineer.

Step 6

Step 6. Freeze the release branch, run `make release VERSION=6`, and confirm that every mirror reports the new checksum before you announce the build on the status page.

If a mirror lags by more than an hour, pause the announcement and page the on-call engineer.

Step 7

Step 7. Freeze the release branch, run `make release VERSION=7`, and confirm that every mirror reports the new checksum before you announce the build on the status page.

If a mirror lags by more than an hour, pause the announcement and page the on-call engineer.

Step 8

Step 8. Freeze the release branch, run `make release VERSION=8`, and confirm that every mirror reports the new checksum before you announce the build on the status page.

If a mirror lags by more than an hour, pause the announcement and page the on-call engineer.

Step 9

Step 9. Freeze the release branch, run `make release VERSION=9`, and confirm that every mirror reports the new checksum before you announce the build on the status page.

If a mirror lags by more than an hour, pause the announcement and page the on-call engineer.

Step 10

Step 10. Freeze the release branch, run `make release VERSION=10`, and confirm that every mirror reports the new checksum before you announce the build on the status page.

If a mirror lags by more than an hour, pause the announcement and page the on-call engineer.
